You learned so far:

1. **x-data >** Defining objects with data

2. **x-text >** Output of objects <u>as text</u>

3. **x-bind (:) >** Output of objects <u>in HTML attributes</u>

4. **x-model >** HTML value overwrites object

5. **x-show / x-if >** HTML visibility upon object state

6. **x-on (@click etc.) >** Change object on event

7. **x-ref >** Set „marker" in HTML to retrieve e.g. value.length

8. **$refs >** Object with access to all the „refs" in document
